NOVELTY (N), INVENTIVE STEP (IS)

Claims 1-13: The cited art, particularly D1, disclose methods of filtration and associated apparatus that use back flushing with gas to maintain the membranes. The cited art discloses this with gas pressures above the bubble point of the systems involved. There is further disclosure of gas scouring of the membranes. However, there is no disclosure or suggestion of operation below the bubble point of the gas nor of concurrent draining from the lumens during the backwash. Hence these claims are considered both novel and inventive.
